

Running Sum of 1D Array:-

Code:-

```
class Solution {  
    public int[] runningSum(int[] nums) {  
        for(int i=1;i<nums.length;i++){  
            nums[i]=nums[i]+nums[i-1];  
        }  
        return nums;  
    }  
}
```

Output:-

The screenshot displays the LeetCode submission interface for the problem "Running Sum of 1D Array". The submission is by user "tameem_shaik" and is marked as "Accepted" with 54/54 test cases passed. The code is written in Java and is as follows:

```
1 class Solution {  
2     public int[] runningSum(int[] nums) {  
3         for(int i=1;i<nums.length;i++){  
4             nums[i]=nums[i]+nums[i-1];  
5         }  
6         return nums;  
7     }  
8 }
```

The runtime performance is 0 ms, beating 100.00% of other submissions. The memory usage is 44.39 MB, beating 35.20% of other submissions. The test results show three cases, all of which are "Accepted" with a runtime of 0 ms.

Testcase 1: Input: [1,2,3,4], Output: [1,3,6,10], Expected: [1,3,6,10]

Testcase 2: Input: [1,2,3,4], Output: [1,3,6,10], Expected: [1,3,6,10]

Testcase 3: Input: [1,2,3,4], Output: [1,3,6,10], Expected: [1,3,6,10]

Richest Customer Wealth:-

Code:-

```
class Solution {  
    public int maximumWealth(int[][] accounts) {  
        int maxWealth = 0;  
        for (int i = 0; i < accounts.length; i++) {  
            int wealth = 0;  
            for (int j = 0; j < accounts[i].length; j++) {  
                wealth += accounts[i][j];  
            }  
            maxWealth = Math.max(maxWealth, wealth);  
        }  
        return maxWealth;  
    }  
}
```

Output:-

The screenshot displays the LeetCode problem page for 'Richest Customer Wealth'. The code is written in Java and is shown in the 'Code' editor. The test results section indicates that the solution is 'Accepted' with a runtime of 0 ms. The input is accounts = [[1, 2, 3], [3, 2, 1]] and the output is 6. The 'Runtime' section shows 0 ms and 100.00% beats. The 'Memory' section shows 44.52 MB and 55.84% beats. The 'Testcase' section shows 'Accepted' with a runtime of 0 ms. The 'Test Result' section shows 'Case 1', 'Case 2', and 'Case 3' all passed. The 'Input' section shows accounts = [[1, 2, 3], [3, 2, 1]] and the 'Output' section shows 6. The 'Expected' section is empty.
